

The Dinzole Pond

A great combination of goldfish and plants makes this 1800-gallon pond a truly beautiful water garden. 2 tropical water lilies bloom vibrant colorful flowers during the day while 2 tropical night-blooming water lilies provide color at night. The water garden showcases 7 water lilies total, a native yellow lotus, dwarf papyrus, umbrella palm, snowflake, pitcher plants and a venus fly trap. The pond was originally built 5 years ago by Greg McCord of Serenity Water Gardens with natural filtration of pad and lava rock but a bead filter and UV were added later for additional cleaning and filtering of the water. The pond is home to goldfish and 2 huge golden orfes. The woods surrounding the Dinzole's house is home to families of deer that one may spot at any given time. The pond is built right up to their deck and many evenings are spent by the pond enjoying the sounds from the waterfall.
