

The Purdy Pond

Sean says it best: "Our pond is a 6000-gallon pond that is 4 ft. deep and 15 ft. wide which I designed and built myself. The filtration system uses a ProBead filter which I have hidden behind a self-designed and constructed pagoda embellished with bamboo strips. There are 2 pumps for the pond — one controls the skimmers and the waterfall — the other controls just the filtration system which pulls from 2 bottom drains. I also designed a waterfall whose flow I can control from inside our home and which I have embellished with various flora. The pond is lighted with fiber optic light which I can also control from inside the home. I currently have 11 koi...Casper, Butterfinger, Spot, Goldfinger, Zipper, Motley, Kunterbunt, Shadow, Oreo and Beige-ing...along with 2 comets, Hubble & Haley.
